# LIFE WITHOUT AFFFs

## Where We Were - Where We Are - Where We're Going

This program is intended for fire service instructors, emergency management officials, airport fire administrators and supply chain supervisors in need of guidance on replacing PFAS AFFFs with Synthetic, Fluorine Free Foams, soon known by NFPA and Underwriters Laboratories as, SFFF's.

This presentation is designed to give attendees an understanding of proportioning and application techniques needed for Fire Department operations at fires or spill security operations involving automobiles: aircraft, road tanker, railcar or marine fires where employing AFFF replacements.

Specific Briefings:

- Suggestions for draining, flushing, replacing and disposing of AFFF (PFAS) foams.
- Reducing the finance burden and environmental impact of training with fire foam and foam training surrogates.
- Understanding NFPA 11 / UL GFGV Foam Std. / NFPA 18 / UL GOHR Wetting Agent Std.
- Where FAA and military are on canceling AFFF's.

Outcome: The attendee will come away with an understanding of changes needed to accommodate the switch to synthetic fluorine free foams, now known as SFFF's.

### *Program Development And Delivery*

*Jim Cottrell of Cottrell Associates, Inc. Combat Support Products, Special Operations Training Division has thirty-eight years experience in special hazards consulting and product development for National Foam's, Fire Service Products Division.
